DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15, drawn to method of operating an alternator, classified in class 318, subclass 700.
 - II. Claims 16-23, drawn to a system for operating an alternator, classified in class 322, subclass 28.
 - III. Claim 24, drawn to an article of manufacture for an alternator, classified in class 701, subclass 29.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention II uses a first and second monitor and a controller coupled to the monitors, a main feature that is not required by invention I. Also, the first monitor comprising a battery state can also be done the second or a plurality of monitors since only a step monitors the battery state of charge.

Art Unit: 2834

3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention I does not require using a computer medium nor a computer program for controlling the battery state of charge. Other means for controlling a battery charge can be done by using analog devices and mechanical devices.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
